Definitions

Benchmark is the S&P 500 Index, an index with 505 constituent companies representing approx. 80% of US market capitalization. **Top-10 Stocks Weight** reflects the average portfolio concentration of the largest 10 stock holdings over a rolling 5-year period. **Average Stock Market Capitalization (Mcap)** reflects the average Mcap of stocks within the portfolio over a rolling 5-year period.

The **Information Ratio** measures portfolio returns above the returns of the benchmark (S&P 500). The **Sharpe Ratio** is a risk-adjusted measure calculated as the ratio of excess return relative to standard deviation. A portfolio Sharpe ratio of >0.75 is considered good. **Tracking Error** measures the portfolio's standard deviation of returns versus the benchmark returns.

*Performance data presented represents past performance, from publish date, derived from the combined Moor Select Equity model portfolio and live portfolio but offers no guarantee of future results. Cumulative performance and ongoing performance will fluctuate. On redemption, the investment value may be higher, or lower, than the initial investment.

Returns since inception reflect performance for Moor Select Equity comparative performance from February 17, 2017 (annualized or cumulative performance) until the date at the top of this factsheet unless otherwise stated. Returns assume reinvestment of dividends but do not include fees. Performance would have been lower if fees and other charges had been included. Double-digit and/or triple-digit returns are highly unusual and unsustainable; such returns are normally achieved during favorable market conditions.

IMPORTANT DISCLOSURE

In considering investments investors should carefully consider the fund's investment objectives, risks, charges, and expenses.
